Morbidity and Mortality

Weekly
Report

U. S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
PUBLIC HEALTH SERVICE

Prepared by the COMMUNICABLE DISEASE CENTER 634-5131

For release April 26, 1963

ATLANTA 22, GEORGIA

Vol. 12, No. 16

PROVISIONAL INFORMATION ON SELECTED NOTIFIABLE DISEASES IN THE UNITED STATES AND ON
DEATHS IN SELECTED CITIES FOR WEEK ENDED APRIL 20, 1963

INFLUENZA — The epidemic of A₂ influenza continues to wane. Influenza and pneumonia mortality for the United States as a whole has returned essentially to expected levels. The Mountain and Pacific Regions only report deaths above the epidemic threshold. (See graph, p. 135).

Poliomyelitis — Reported cases of poliomyelitis during the first 16 weeks are at a record low level. Total cases are less than half that reported for the comparable period during 1962 and approximately one-sixth of the median total over the past five years. Paralytic cases are also sharply diminished over previous years, although the reduction is less pronounced. (See table, right column).

**POLIOMYELITIS (CUMULATED WEEKLY) THROUGH 16TH WEEK
FOR PAST FIVE YEARS**

	1963	1962	1961	1960	1959
Paralytic	39	61	82	182	251
Total	43	89	127	252	354

EPIDEMIOLOGICAL REPORTS

Conjunctivitis — Oklahoma

Between November 14 and 21, 1962, 41 of the 350 boarding students at Sequoyah Vocational School reported to the school clinic with eye complaints. All reported

Table 1. CASES OF SPECIFIED NOTIFIABLE DISEASES: UNITED STATES
(Cumulative totals include revised and delayed reports through previous week)

Disease	16th Week			Cumulative		
	Ended April 20, 1963	Ended April 21, 1962	Median 1958 - 1962	1963	1962	Median 1958 - 1962

Table 2. NOTIFIABLE DISEASES OF LOW FREQUENCY

Anthrax:	Cum. 1	Psittacosis: Calif. - 1	Cum. 21
Botulism:	5		-
Malaria: Hawaii - 1, Mo. - 1	32	Rabies in Man:	-
Plague:	-	Smallpox:	-
		Typhus, murine:	2

symptoms of eye irritation but denied photophobia or purulent discharge. Four patients gave a history of recent sore throats but all denied fever or other systemic symptoms. One patient was observed to have cervical lymphadenopathy. Ophthalmological examination of the patients revealed minimal bulbar conjunctival erythema. There was a lower tarsal follicular reaction, most marked in the lower conjunctival cul-de-sac, as well as a few follicles on the upper tarsus and occasionally on the bulbar conjunctiva. Slit lamp examination of the upper limbus and cornea was normal in all cases. The clinical history and ophthalmological examination suggested the diagnosis of viral conjunctivitis.

On November 26, the entire student body was examined with the aid of a magnifying loupe for the presence of acute follicular conjunctivitis. A total of 84 (27 percent) of 311 students examined were found positive. In addition, three students demonstrated healed trachoma and one boy was found with early active trachoma and started on therapy.

The attack rate (36.8 percent) for female students was significantly higher than that for male students (16.2 percent). Interestingly, the use of eye makeup among female students was widespread and several supervisors noted that it was common for several girls to share the same eye makeup on any one day. The attack rate for those using eye makeup was significantly higher than for those not using eye makeup, as shown in the table below:

<u>Group</u>	<u>Number</u>	<u>Conjunctivitis</u>	<u>Rate Per 100</u>
Used Eye Makeup	70	30	42.9
Used No Eye Makeup	54	14	25.9
Total	124	44	35.5

Extensive laboratory studies have not revealed an etiologic agent. Bacteriologic and virologic examinations were unrevealing, although cytologic examination of the conjunctival cells was consistent with a viral conjunctivitis. There was no serologic evidence of recent adenovirus infection.

(Reported by Dr. I. J. Farin, Acting Chief, Division of Indian Health; and the Communicable Disease Center.)

Puerperal Sepsis - New York State

During the period November 9 to November 19, 1962, seven cases of post-partum infection occurred among patients on a hospital obstetrical service in New York State. All suffered sudden onset of fever, with temperatures up to 104°F. Cultures of the cervix from all patients yielded hemolytic streptococci and each patient responded promptly to treatment with combinations of penicillin and broad spectrum antibiotics. The shortest

observed period from admission to onset of illness was 48 hours.

During the period of the outbreak, a house staff member who had been in contact with all seven cases was observed to have a sore throat and a draining paronychia. Cultures of both his throat and finger yielded hemolytic streptococci. The house officer was barred from duty on November 17, given a course of penicillin therapy, and allowed to return to work following clinical recovery and conversion of his throat cultures to negative. No subsequent cases have been observed.

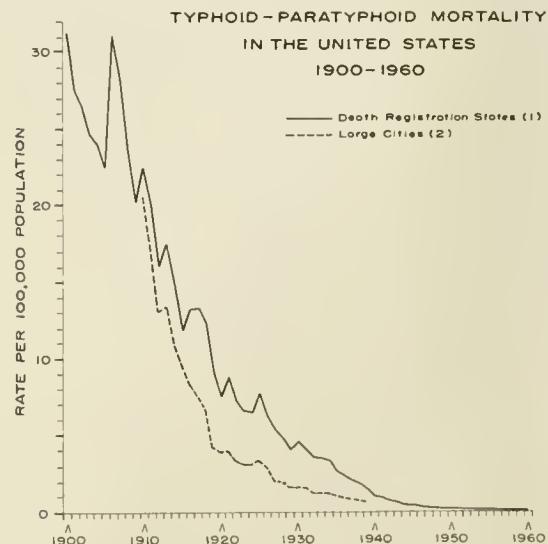

While cultures were not available for serotyping, the epidemiological evidence pointed to the resident house staff member as the source of infection. No other members of the nursing or house staff were observed to be ill.

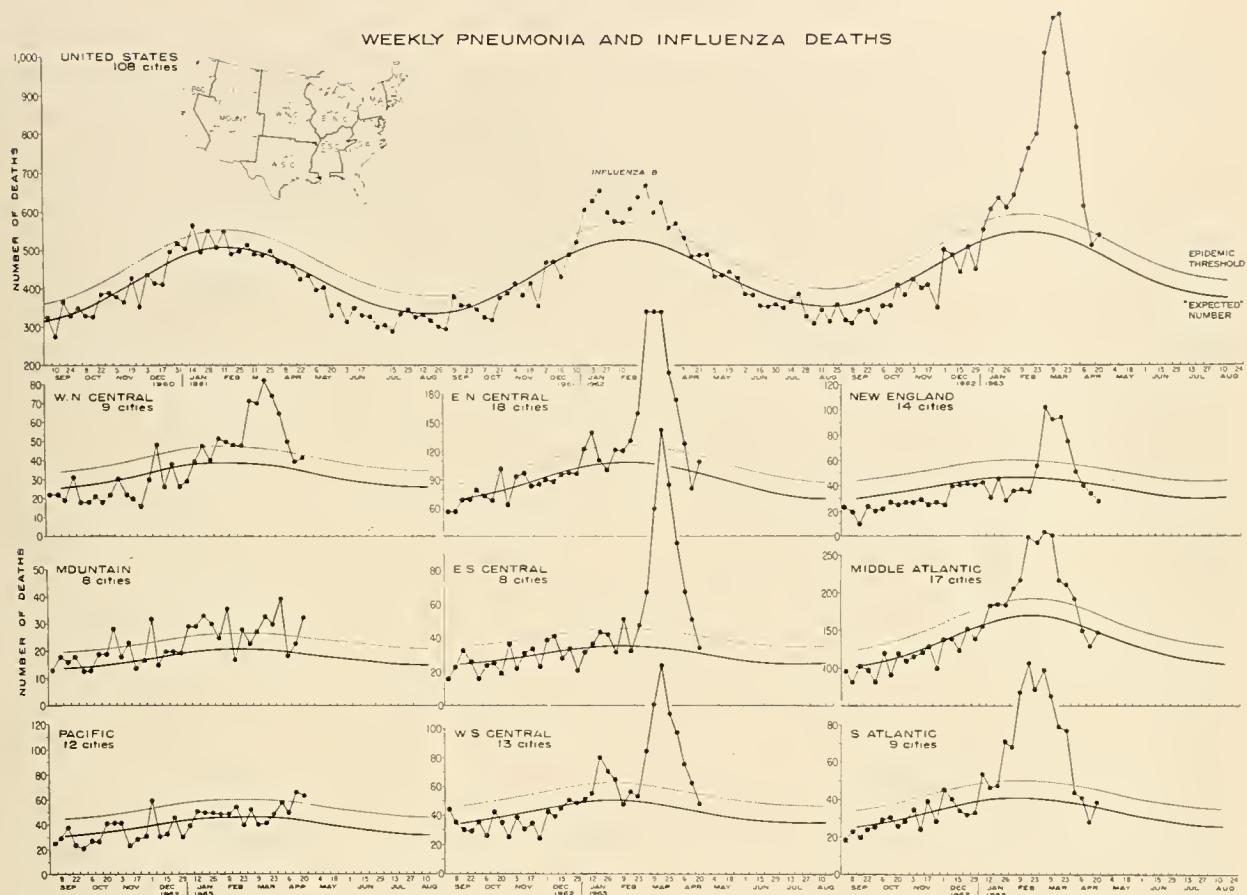

(Reported by Virginia L. Oliver, Epidemiologist, New York State Department of Health.)

Typhoid - Paratyphoid Mortality

Over the past 60 years, there has been an almost 2,000-fold decrease in the typhoid-paratyphoid mortality rate in the United States. The mortality from typhoid and paratyphoid fell from 31.3/100,000 population in 1900 to 0.016 in 1960. It is estimated that in the neighborhood of 25,000 deaths in the U. S. were due to these diseases. In the last three reporting years, the reported deaths have been less than 25 yearly - 21 in 1960, 22 in 1959, and 23 in 1958.

It is interesting to note that a public water supply was first chlorinated in 1908. From the accompanying graph, it is seen that the downward trend was already present before chlorination of water supplies became a widely accepted public health measure.

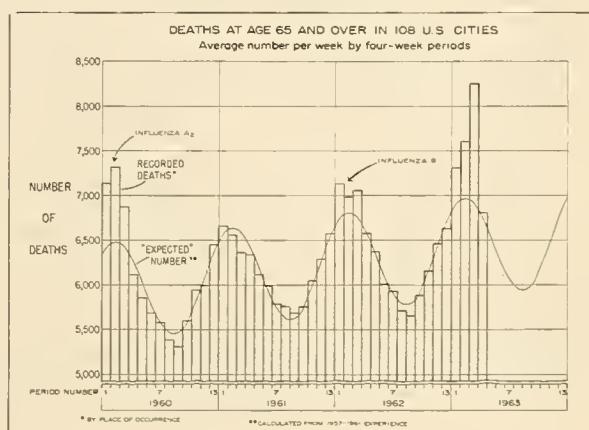

Pneumonia-influenza mortality — During the week ending April 20, pneumonia-influenza deaths in the 108 cities increased reflecting a late seasonal rise in the Mountain and Pacific States. All other geographic divisions remained within expected ranges although some divisions reported slight increases over figures reported during the previous week. These are in part the result of reports delayed during the week of the Easter holidays.

Deaths among persons 65 years and over — as shown in the accompanying table and bar chart, deaths from all causes at ages 65 and over declined to expected levels during the four-week period ending April 20.

	WEEK ENDING				4 Week Total	Weekly Average
	3/30	4/6	4/13	4/20		
Observed	7,387	6,918	6,289	6,673	27,267	6,817

INTERNATIONAL NOTES - QUARANTINE MEASURES

Suspect Smallpox - Great Britain

A 2-month-old Pakistani child has been hospitalized in London with a rash suspicious of smallpox. The child departed Karachi April 22, 1963, aboard BOAC Flight 701, arriving in London on the afternoon of the same day. Nine days prior to departure, the child was vaccinated against smallpox. Appropriate laboratory studies have been undertaken, but as yet the clinical diagnosis of smallpox is unconfirmed. Three individuals, also aboard BOAC Flight 701 from Karachi to London, have since continued their travels to the United States, arriving at Idlewild Airport late in the evening of April 22. The names of these individuals and their destination addresses have been transmitted to local health authorities in the areas of declared destination.

(Reported by Dr. Ralph W. McComas, Division of Foreign Quarantine, Paris, France, and Dr. W. G. Simpson, Epidemiologist, Division of Foreign Quarantine, Washington, D. C.).

Yellow Fever - Peru

The Government of Peru has officially reported 9 cases and 2 deaths from yellow fever in Ayna, Lamar Province, Ayacucho Department.

Yellow Fever - Bolivia

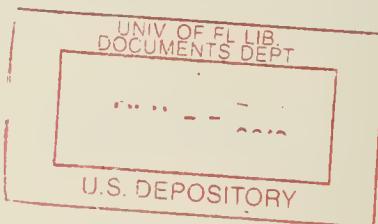

The Government of Bolivia has officially reported 8 deaths due to yellow fever in Caranazi, Canton, Nor Yungas Province, La Paz Department.

Notes: These provisional data are based on weekly telegrams to the Communicable Disease Center by the individual State health departments.
